MOC Guideline

Auto Complete 2

Auto Complete is a feature that decreases the amount of time spent typing repetitive words and phrases, especially when user needs to enter a particular string into a text box which could be ambiguous or hard to remember and therefore has the potential to be mis-typed. Auto Complete involves the program predicting what the user wants to type in without the user actually typing it in completely.

Sample:

Label

Code

```
<div class="form-group" ng-controller="data">
<Label class="form-control" placeholder="Origin" aria-describedby="sizing-addon1"
ng-model="autocomplete" data="state as state.name for state in states |
filter:$viewValue"></autocomplete>
</div>
```

Drop-down List & Combo Box

A drop-down list is a list in which the selected item is always visible, and the others are visible on demand by clicking a drop-down button.

A combo box is a combination of a drop-down list and an editable text box, thus allowing users to enter a value that isn't in the list.

Sample:

Label:

• With a standard **drop-down list**, users are limited to choices in the list

Code

```
<div class="form-inline">
Cargo Nature:
<select class="form-control">
<option> Dry / Reefer</option>
<option> Dry</option>
<option> Reefer</option>
</select>
```
